

Sales & Revenue Analysis Dashboard

This project focuses on building an interactive dashboard to analyze sales and revenue data. The dashboard helps businesses track KPIs, monitor sales trends, identify top-performing products, and generate actionable business insights.

Key Features

- Import data from Excel, CSV, or databases
- Visualize total sales and revenue trends
- Analyze top-performing products and regions
- Interactive charts, filters, and slicers
- Business KPI tracking and reporting

Dashboard KPIs

KPI	Description
Total Sales	Overall sales generated
Revenue	Total revenue earned
Top Products	Highest selling products
Regional Analysis	Sales distribution by region

Tools Used

- Microsoft Excel / Power BI
- CSV / Excel Dataset
- Data Visualization Techniques
- Business Intelligence Concepts

Expected Outcome

Learn dashboard creation, KPI tracking, data visualization, and business insight generation using modern analytics tools.
